

## Class 2 Transformers

Clarence, Iowa – Wabash Transformer Inc. “CL” series power transformer line.

These are designed to provide AC power for any industrial or commercial application where UL Class 2 (UL 1585, UL 5085-3) recognitions are required.

The “CL” Series, ranges in power handling from 5VA up to 96VA. These are provided with isolated primary to secondary windings designed to meet the required dielectric voltage withstand (hipot) characteristics for the primary voltage. Primary voltages are available as a single or can be a multiple voltage range, for adaptability in applications. This flexibility will allow many uses from a standard component.

We offer the Class “F” (155°) insulation system with our product. This insures that our product materials will meet criteria for a replacement of a Class “B” product, with better materials able to handle any conditions. Integrated touch safe plastic covers offer better exterior protection and are standard.

The fun doesn't stop there either! Wabash Transformer can provide custom choices in connectors and wiring, or mounting pattern and direction.
